J. Mol. Biol. 222:1-9(1999).
-!- FUNCTION: Integrin alpha-L/beta-2 is a receptor for ICAMI, ICAMZ,
-!- FUNCTION: Integrin alpha-L/beta-2 is a receptor for ICAMI, ICAMZ,
ICAM3 and ICAM4. It is involved in a variety of immune phenomena
including leukocyte-endothelial cell interaction, cytotoxic T-cell
mediated killing, and antibody dependent killing by granulocytes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             П

Integrins with I-domains do not undergo protease cleavage.
-!- SIMILARITY: Belongs to the integrin alpha chain family.
-!- SIMILARITY: Contains 7 FG-GAP repeats.
-!- SIMILARITY: Contains 1 VWFA domain.

                                                                                                                                      SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-Lassociates with beta-2.
SUBCELULAR LOCATION: Type I membrane protein.
SUBCELULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Leukocytes.
DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 7 FG-GAP repeats.
SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                PEGMI, PF01837; Integrin_alpha; 1.

Screening assay for modulators of integrin binding - using immobilised or labelled alpha-d polypeptide, useful for, e.g. treating type-I diabetes. Screening

Example 5; Fig 1A-D; 106pp; English.

This sequence represents a human beta-integrin CD11b subunit which is sued to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat

in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression con which beta subunit. The leukcoyte structure blood cells and have a common beta2 subunit: the leukcoyte integrins, Leu-CAMs, leukcintegrins or beta2 integrins. Beta2 integrins can important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CDILb. This sequence protein sequence is the human integrin alpha subunit CDILb. This sequence was used in an alignment to identify a novel beta2 integrin alpha cubunit; alpha d (AAA60014 and AAB07359). The present sequence has approximately $0% identity to the protein sequence of alpha_d. The capproximately $0% identity to the protein sequence of alpha_d. The approximately $0% identity to the protein sequence of alpha_d. The constant alpha d function e.g. Type I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory (LAD). In addition, anti-alpha d monoclomal antibodies may be used in the inflation of macrophage inflateration at the site of a central nervous system injury. The monoclomal antibodies can also be used to detect and

This invention relates to a modified integrin-I or integrin I-like domain polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention may ave antiinflammatory or imunosuppressive activities. The invention of polypeptides of the invention have an open conformation and are useful as immunogens to produce antibodies that selectively bind to integrin I-domain, and for identifying a modulator of integrin activity, or of intearction of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-I antibody) is useful for invention, or autoimmune disorder in a subject and for inhibiting the binding of an integrin to a cognate ligand such as Crohn's disease, chiding of an integrin to a cognate ligand such as Crohn's disease, should not an integrin to a cognate ligand such as Crohn's disease, spinding of an integrin darthritis, dermatitis. A therapeutic composition comprising the peptide of the invention is useful for the integrin mediated disorder in a subject. The polypeptides

```

The invention relates to promoting locomotor recovery, inhibiting autonomic and sensory definiting locomotor impairment, or limiting autonomic and sensory defunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a related form following spinal cord injury victim. The method also involves the use of a ligand spinal cord injury victim. The method also involves the use of a ligand selected from [CAM-N or VCAM-1 (intracellular cell adhesion molecule).

The method is useful for promoting commonic recovery, inhibiting locomotor damage, limiting locomotor inpairment, or limiting autonomic and sensory dysfunction following spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrins alphab cord inflammatory response, diabetes unalliple sclerosis, arthritis, graft atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative collisis, immune complex alveolitis and leukaemia. The present sequence is a Beta2 integrin alpha protein sequence included for comparison with the Beta2 integrin alphab protein sequence

The invention comprises structurally biased variant integrin inserted (I) domain proteins, wherein the alterations to the protein occur in at least two noncontinuous regions. Specifically the the variant integrin I domain proteins are structurally biased to exist in the open conformation, thereby altering the binding ability of the protein. The invention also comprises nucleic acids encoding the variant integrin I domain proteins. The integrin I domain proteins and nucleic acids are useful for treating, preventing or suppressing integrin related inflammatory and immunological disorders (e.g. rheumatoid archritis). The variant integrin I domain proteins and nucleic acids con eused for treating: ischaemia/ reperfusion (e.g. hypovolemic shock); infarction; cerebral shock; viral infection; and cancer. The variant integrin I domain nucleic acids and infection; and cancer. The variant integrin I domain nucleic acids and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ·

RESULT 7 AAR04136 g ठे g ò g ò 9  $\delta$ qq à pharmaceutical composition comprising the binding domain-immunoglobulin fusion protein or polynucleotide and a carrier, and treating a subject thaving or suspected of having a malignant condition or a B-cell disorder. The binding domain-immunoglobulin fusion protein is useful for treating a subject having or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, myasthenia gravis, Grave's disease, type I diabetes mellitus, multiple solarosis or autoimmune disease. The present sequence is a binding domain -immunoglobulin fusion protein-associated protein sequence. Note: The sequence data for this patent formed part of the printed specification and is also available in electronic format directly from USPTO at sequence. The sequence in the printed specification by their SEQ ID number therefore none of the sequences can be explicitly identified. 360 RLQVPVEAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTYVKGLCFLFGSNLRQQPQK 120 RLQVPVEAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTYVKGLCFLFGSNLRQQPQK 136 240 300 316 436 480 376 GVFLYTSKEKSTFINMTRVDSDMNDAYLGYAAAIILRNRVQSLVLGAPRYQHIGLVAMFR 420 496 540 556 919 949 720 SLVGTPLSAFGNLRPVLAEDAQRLFTALFPFEKNCGNDNICQDDLSITFSFMSLDCLVVG 796 92 FNLDTENAMTFGENARGFGGSVVQLQGSRVVVGAPQEIVAANQRGSLYQCDYSTGSCEPI TDGEKFGDPLGYEDVI PEADREGVIRYVIGVGDAFRSEKSRQELNTIASKPPRDHVFQVN NFEALKTIQNQLREKIFAIEGTQTGSSSSFEHEMSQEGFSAAITSNGPLLSTVGSYDWAG 377 GVFLYTSKEKSTFINMTRVDSDMNDAYLGYAAAIILRNRVQSLVLGAPRYQHIGLVAMFR FNLDTENAMTFQENARGFGQSVVQLQGSRVVVGAPQEIVAANQRGSLYQCDYSTGSCEPI PPBALRGCPQEDSDIAFLIDGSGSIIPHDFRRMKEFVSTVMEQLKKSKTLFSLMQYSEEF RIHFTFKEFQNNPNPRSLVKPITQLLGRTHTATGVRKVIRELLNITNGARKNAFKILIVI NFBALKTIQNQLREKIFAIEGTQTGSSSSFEHEMSQEGFSAAITSNGPLLSTVGSYDWAG QNTGMWESNANVKGTQIGAYFGASLCSVDVDSNGSTDLVLIGAPHYYEQTRGGQVSVCPL PRGQRARWQCDAVLYGEQGQPWGRFGAALTVLGDVNGDKLTDVAIGAPGEEDNRGAVYLF PRGQRARWQCDAVLYGEQGQPWGRFGAALTVLGDVNGDKLTDVA1GAPGEEDNRGAVYLF HGTSGSGISPSHSQRIAGSKLSPRLQYFGQSLSGGQDLTWDGLVDLTVGAQGHVLLLRSQ YDLALDSGRPHSRAVFNETKNSTRRQTQVLGLTQTCETLKLQLPNCIEDPVSPIVLRLNF SLVGTPLSAFGNLRPVLAEDAQRLFTALFPFEKNCGNDNICQDDLSITFSFMSLDCLVVG PVLRVKAIMEFNPREVARNVFECNDQVVKGKEAGEVRVCLHVQKSTRDRLREGQIQSVVT 0; Length 1153; 1; Indels 7; DB 3; Mismatches Score 5868; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mac-1 alpha subunit is involved in the response to inflammation, i.e. recognition of and migration to sites of inflammation. It also attaches to cellular substrates as part of this function making it useful in visualising endothelial tissue. Mac-1 is a member of the Integrin Gene superfamily.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel isolated or recombinant modified integrin protein having extracellular domains of integrin alpha and beta submints where one of the subunits has one or more mutations, an altered surface feature or an amino acid substitution or internal deletion, extracellular domains of the integrin beta subunit that comprise a mutation that alters a non-cysteine residue to systeine or extracellular mutation that alters a non-cysteine residue to systeine or extracellular companies of integrin alpha and beta subunits. The polypeptide of the invention demonstrates antipsoriatic, thrombolytic, anticoagulant, osteopathic, cytostatatic, immunosuppressive, antinflammatory, neuroprotective and antisickling activities and may be useful for immunocherapy in order to prevent or treat an integrin-mediated disorder such as an inflammatory disorder, an autoimmune disorder, thrombosis, cancer, osteoprosis, sickle cell anaemia, psoriasis and multiple sclerosis. The current sequence is that of the human integrin alpham subunit precursor protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel modified integrin protein having extracellular domains of integrin alpha and beta subunits or integrin alphaII and beta3 subunit, useful for treating integrin mediated disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RLQVPVEAVNMSLGLSLAATTSPPQLLACGPTVHQTCSENTYVKGLCFLFGSNLRQQPQK 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           496
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  196
                                                                                                                                                                                                                                                                                                                                                      The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, xenotransplant rejection or mechanical organ replacement rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring an individual. The methods are also useful in diagnosing and monitoring lakeases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein that is encoded by the mRNA of the invention.

English

The present invention describes a method (M1) for identifying an inhibitor of HIV entry into a human host cell. (M1) comprises identifying an inhibitor of HIV entry into a human host cell. (M1) comprises identifying an inhibitor of a cell surface polypeptide selected from CXCR-4 (352 amino acids, SEQ ID NO:10, ADP44061), CDA7 (353 amino acids, SEQ ID NO:10, ADP44061), CDA7 (353 amino acids, SEQ ID NO:10, ADP44061), CDA7 (353 amino acids, SEQ ID NO:16, ADP44063), CDB8 (354 amino acids, SEQ ID NO:18, ADP44065), CDB9 (199 amino acids, SEQ ID NO:20, ADP44065), CDB9 (199 amino acids, SEQ ID NO:20, ADP44067), CDA7 (565 amino acids, SEQ ID NO:20, ADP44071), RARA (462 amino acids, SEQ ID NO:20, ADP44071), PARA (462 amino acids, SEQ ID NO:20, ADP44071), PARA (462 amino acids, SEQ ID NO:30, ADP44071), CDA (462 amino acids, SEQ ID NO:30, ADP44071), PARA (462 amino acids, SEQ ID NO:30, ADP44071), PARA (462 amino acids, SEQ ID NO:30, ADP44071), PARA (462 amino acids, SEQ ID NO:30, ADP44081), Or PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids, SEQ ID NO:30, ADP44081), COR PYEXB (1009 amino acids a human host cell useful for preventing and/or treating HIV infection, identifying an inhibitor of a cell surface polypeptide such as CXCR-4.                                                                                                                                                                                                                     137
                                                                                                                                                                                                                                                                                                                                                                                                   09
                                                                                                                                                                                79
                               The invention comprises marker genes for inflammatory bowel disease (IBI - FogammaR IIIa, FogammaR IIIb, Mig, NRG-2, hexokinase, HM74, REG III, LPAP, Mip-1 (beta), L-selectin, EGFL6, IDO, IL-8, CD11c, and THR2 genes. The DNA and protein sequences of the invention are useful in the detection and treatment of IBD (e.g. ulcerative colitis and Crohn's disease). The present amino acid sequence represents an IBD marker protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GPREFNVTVTVTVRNDGEDSYRTQVTFFFPLDLSYRKVSTLONORSORSWRLACESASSTEV

The method of the invention has earl sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is that current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human.

RNA extracted from phorbol myristate acetate stimulated HI-60 myelomonocytic cells. The library was screened with oligonuclectide probes based on tryptic peptide fragments of pi50.95. The sequence can be attached to appropriate control elements and expressed in prokaryotic and eukaryotic cells. The protein can be used to treat or prevent rhinoviral infection because it interacts with ICAM-1 and inhibits cell-virus attachment. It can also be used as an anti-inflammatory agent. See also AAQ06063-4, AAQ06068, AAR0711-8 and AAR07152-6. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                               120

This sequence represents a human beta-integrin CDIIc subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d alseases such as type-I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome
                                                                                                                                                                                   1079
                                                                                                                         1019
                                                                                                                                                                                                                1094

use of novel anti-alpha integrin d monoclonal antibodies to inhibit macrophage infiltration and reduce inflammation at central nervous system injury sites.

Example 5; Fig 1; 270pp; English.

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta2 subunit: the leukcyte can in white blood cells and have a common beta2 subunit: the leukcyte beta2 integrins. Leu-CAMS, leukcintegrins or beta2 integrins. Beta2 integrins conversed in an important role in immune and inflammatory responses. The present conversed in an alignment to identify a novel beta2 integrin alpha conversed in an alignment to identify a novel beta2 integrin alpha approximately 66\* identity to the protein sequence has approximately 66\* identity to the protein sequence of alpha d. The Alpha d gene and protein may be useful in therapy for diseases linked to aberrant alpha d function e.g. Type I diabetes, atherosclerosis, multiple constress syndrome, rheumatoid arthritis and leukcoyre adhesion deficiency confinibition of macrophage infiltration at the site of a central nervous confinibition of macrophage infiltration at the site of a central nervous and an antipa of the confining the confining of the confining and leukcoyre adhesion and the site of a central nervous confining or the confining and leukcoyre adhesion and confining and confining and protein and conclours and the site of a central nervous confining the confining and protein and the site of a central nervous confining and protein and confining
